- Learning and sharing event
- Presentations from across NHS Scotland and England
- Experiences and lessons learned from our three pilot sites

Whole System Patient Flow Improvement Programme

Quality and Efficiency Support Team

Poor patient flow can mean that patients wait for treatment, might be on a sub-optimal pathway – possibly not as effective or perhaps longer - treatment might be incomplete and the patient could be delayed once their treatment is complete.

Criteria led discharge enables delegated decision making by members of the multi-disciplinary team thus ensuring discharge from an acute hospital at the optimum time and day for patients and the prevention of unnecessary delays.

Whole System Patient Flow Improvement Programme - Workstreams

Quality and Efficiency Support Team

- Established – ‘Spread’:
 - Enhanced Recovery
 - Fracture Redesign
 - Day Surgery
- Developing:
 - Patient safety/Flow ‘Huddles’
 - Criteria-led Discharge
- Proof of Concept
 - Institute for Healthcare Optimisation (IHO) Variability Methodology
